

EE210

Humidity and Temperature Transmitter for Demanding Climate Control

The EE210 transmitter by E+E Elektronik meets the highest requirements in demanding climate control applications. Besides the accurate measurement of relative humidity (RH) and temperature (T), EE210 calculates various RH related parameters such as dew point, temperature, absolute humidity and mixing ratio. All measured and calculated values are available on the BACnet MS/TP or Modbus RTU interface, two of them are available on the analogue voltage or current outputs, while up to three values can be shown simultaneously on the optional display.

Excellent performance of EE210 in polluted or aggressive environment is ensured by the encapsulated measurement electronics inside the sensing probe and the long-term stable HCT01 sensor with E+E proprietary coating.

EE210 is available as wall or duct mounted version as well as with remote probe. The IP65 / NEMA 4 enclosure minimizes installation costs and provides outstanding protection against contamination and condensation.

With an optional configuration kit, the user can set the RS485 interface parameters, the output scaling and perform one or two point adjustment for RH and T.

EE210

Applications

- agriculture
- green houses
- indoor pools
- stables, incubators, hatchers
- storage rooms, cooling chambers
- demanding climate control

Features

Appropriate for US mounting requirements

- » Knockout for 1/2" conduit fitting

External mounting holes

- » Mounting with closed cover
- » Electronics protected against construction site pollution
- » Easy and fast mounting

Electronics on the underside of the PCB

- » Optimum protection against mechanical damage during installation

Bayonet Screws

- » Open/closed with a 1/4 rotation

Cast Electronics

- » Mechanical protection
- » Condensation-resistant

E+E Humidity sensor HCT01

- » Long-term stability
- » Protected solder pads
- » Tested according to automotive standard AEC-Q200

Protective sensor coating

The E+E proprietary sensor coating is a hygroscopic layer applied to the active surface of the HCT01 sensing element. The coating extends substantially the life-time and the measurement performance of the E+E sensor in corrosive environment (salts, off-shore applications). Additionally, it improves the sensor's long term stability in dusty, dirty or oily applications by preventing stray impedances caused by deposits on the active sensor surface.

Display

- » Selectable display layout
- » Measurands freely selectable
- » Backlight optional

Smooth cover surface

- » No accumulation of dust in protruding edges
